

S500

Instructions for Use

ENS500

EN Instructions for Use

3

Blatchford:

1 Description and purpose

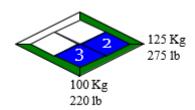

These instructions are for use by the practitioner.

- The ENS500 is to be used exclusively as part of a lowerlimb prosthesis. Intended User:
- · Recommended for amputees with Mobility Grade 2 and 3.
- Weight limit for a user is up to 125kg/275lbs
- Ability to lock the knee in full extension to assist in the rehabilitation process by tightening the linkage base fix screw

Contra-indications

- Residual muscular weakness, contractures or proprioceptive dysfunction including poor balance
- Contra lateral joint instabilities or pathology
- Complicated conditions involving multiple disabilities

Ensure that the sure has understood any Instructions for use, drawing particular attention to the safety information

Product code

• ENS500

Polycentric pneumatic knee unit (Aluminum)

2 Construction

Principal Parts:

Frame Aluminum Alloy, Brass, Stainless Steel, Steel

Knee head Aluminum Alloy, Stainless Steel

Knee control
 Various materials principally Aluminum Alloy, Stainless Steel,

Polyurethane, Pneumatic Cylinder

3 Function

- Adjustable extension assist spring
- · Range of Proximal adapters available to facilitate
- Independently adjustable pneumatic flexion and extension resistances.
- Adjustable flexion and extension resistances feature for various users
- A fixed base screw to lock the knee in full extension "strictly" for training purpose during the mobility rehabilitation process.

(Note: the base fix screw should not be used to permanently lock the knee in full extension.)

4 Safety Information

The caution symbol highlights safety information which must be followed carefully

Be aware of finger trap hazard at all times

Any changes in performance of the knee e.g. instability or double action in the knee, should be immediately reported to the Clinician/Practitioner

Always use a hand rail when descending stairs and at any other time if available

Any excessive changes in heel height may adversely affect the stability of the knee

The user should be advised to contact their Clinician/Practitioner if their condition changes

5 Maintenance

Maintenance must be carried out by qualified personnel.

A visual inspection annually is recommended.

Check for visual defects that may affect proper function.

A loaner system is available should servicing be required.

The wearer should be advised:

Any changes in performance of this device must be reported to the Clinician/Practitioner.

Changes in performance may include:

- Increase in knee stiffness
- Knee instability
- Any unusual noises

Cleaning:

Use a damp cloth and mild soap to clean the outside surface.

DO NOT use aggressive cleansing agents.

If the limb comes into contact with salt or chlorinated water, it should be rinsed with fresh water and dried.

6 Limitation on use

Intended Life:

- Service life of the product is covered by the warranty period.
- This product is recommended for use with other Blatchford Products.
- A local risk assessment should be carried out based upon activity and usage when using as part of a hybrid limb build with other manufacturers components.

Lifting Loads:

Amputee weight and activity is governed by the stated limits.

Load carrying by the amputee should be based on a local risk assessment.

Environment:

Avoid abrasive environments such as those containing sand for example as these may promote premature wear.

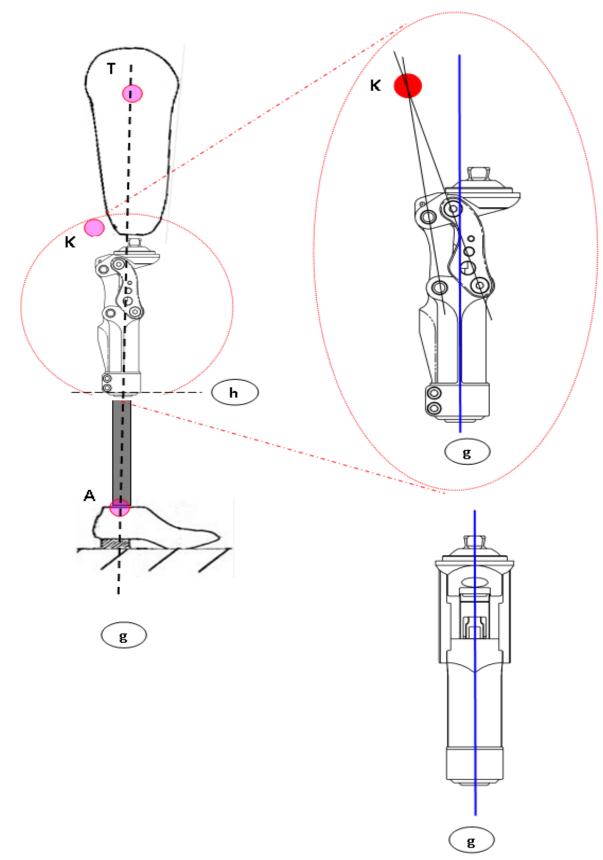

Operating and Storage Temperature Range:

Exclusively for use between temperatures of -10°C and 50°C [14°F and 122°F]

7 Alignment and Set-up

⚠

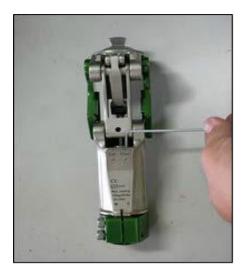

Users be aware of potential finger trap hazard

- 1. Assemble the prosthesis.
- Recommended static/bench alignment is with the foot externally rotated 5
 degrees, the socket flexed 5 degrees and abducted 5 degrees. However this will
 solely be dependent upon the alignment of the residuum.
- 3. Align socket in appropriate Flexion/Adduction for the patient
- 4. Make sure that foot is perpendicular to the pylon on the ground level.
- 5. Make sure that knee unit is also perpendicular to the ground. (h line is parallel with ground)
- 6. Make sure the gravity line **g** pass through the center of the knee bottom.
- 7. Set the static alignment taking into account the heel height of the footwear.

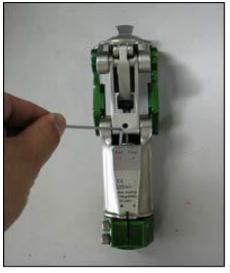

8 Knee Adjustment

8.1 Extension/Flexion resistance adjustment

Extension resistance adjustment

Turn the "Extension" screw clockwise with a 2.5mm wrench driver to narrow the air-flow gap so that it increase the resistance while knee flexes, and vise versa.

Flexion resistance adjustment:

Turn the "Flexion" screw clockwise with a 2.5mm wrench driver to narrow the air-flow gap so that it increases the resistance while knee flexes, and vise versa.

8.2 Adjusting the extension assist spring:
Use 10mm wrench driver and turn the
screw of extension assist spring clockwise
to compress the inner spring to increase
extension assistance. Turn the screw anti
clockwise to decrease the extension
assistance.

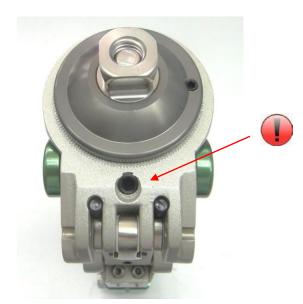

After fitting the kneejoint onto the pylon, please make sure to use Loctite 242 to secure the pinch bolt.

8.3 Upper male pyramid adaptor adjustment:

Loose the bolt head of the male pyramid using an 8mm wrench. Adjust the position of male pyramid according to the alignment of prosthesis. When all adjustments are done tighten the 8mm bolt with 30Mn torque setting. Use Loctite 242 to glue the bolt.

The base fix screw should not be used to permanently lock the knee in full extension. It can be used to lock the knee in full extension "strictly" for training purpose during the mobility rehabilitation process only.

- 8.4 Lamination instructions for Lotus adapter (for use with existing socket)
- Attach lotus plate to socket. Use alignment fixture for pre-aligned position. Center hole
 must be protected. Only a small amount of epoxy glue is necessary. Do not get wire
 cage in glue. When epoxy is dried and alignment is secured move the socket to the
 laminating fixture.
- Apply one layer of a composite material (NSP, Fiberglass or Carbon) under the cage on a well sanded socket
- 3) Apply a layer of nylon over the cage and ring. Tie a strong fiber around the nylon just below the ring. Do not invert back over.
- 4) Apply a second layer of composite over the Nylon. Tie a strong fiber around the ring groove. Invert the composite then the nylon over.
- 5) Fill distal hole with clay or silicone putty. Lubricate the distal plate with a light coat of petroleum jelly.
- 6) Finish with a PVA bag and lamination.

9 Maintenance of knee unit

9.1 Change the inner spring of pneumatic unit

Loosen the bottom clamp, its axial screws, and whole base including an inner spring with a 5mm hexagon wrench

Replace the old spring with a new one and put the whole bottom section of the knee back by following reversed steps above.

9.2 Change the O-ring of a piston set

Repeat the steps of "9.1 Change the inner spring of pneumatic unit", to take off the whole Extension assist unit to reveal the inner piston.

Loosen the screw of a piston unit with a 3mm hexagon wench

Take off the piston set by using a hook tool

Take off the "O" ring and Teflon rings with a small flared tip screwdriver

Put cleaned Teflon rings and the replacement of "O" ring back on to the piston

Clean the inner copper of knee body with Isopropyl alcohol and smear with a thin layer of lubricant

Reverse all steps above for re-assembling piston and extension assist spring sets back to knee unit.

9.3 Changing the Rubber bumper

Use a small flared tip screwdriver to take out the old bumper and replace it with a new one.

10 Technical Specification

Operating and Storage Temperature Range: -10°C to 50°C 14°F to 122°F

Weight: 882g

Recommended Activity: K2/K3

Maximum User Weight: K2: 125kg (275lbs)

K3: 100kg (220lbs)

Maximum flexion angle: 145 degrees

Proximal Alignment attachment: Rotatable Socket Attachment

Plate Rotatable Lotus Adaptor

Distal Alignment attachment: Tube Clamp

Tube clamp torque setting: 12Nm

Build Height: Knee to Distal end 220(+20)mm

Materials: Aluminum Alloy, Stainless Steel, Steel, Rubber

Key Dimensions:

11 Warranty

Warranted for 2 years from the date of invoice by Blatchford Products Ltd.

The user should be aware that changes or modifications not expressly approved will void the warranty.

12 Liability

The manufacturer recommends using the device only under the specified conditions and for the intended purposes. The device must be maintained according to the instructions for use supplied with the device. The manufacturer is not liable for damage caused by the component combinations that were not authorized by the manufacturer.

CE Conformity

This product meets the requirements of 93/42/EEC guidelines for medical products. This product has been classified as a class I product according to the classification criteria outlined in appendix IX of the guidelines. Please keep this manual in safe place for future use.
