

### Silcare Breathe Liners

Breathable technology for drier skin and socket security

# Blatchford

## Innovation at Work: A new direction in silicone liner technology

Optimal control of a prosthetic limb depends on a comfortable and secure connection between limb and socket. Modern liner technology provides excellent cushioning, but the impermeable and insulating materials can allow a build-up of heat and moisture so they begin to slip and chafe. Air, perspiration and unnecessary movement can cause a loss of connection, compromised stability and damage to residual skin, potentially affecting mobility, safety and independence.

The patented technology of Silcare Breathe works by letting the air and perspiration that are often trapped between the liner and skin to escape through specially designed laser drilled perforations. The air and moisture are then expelled from the socket as the wearer walks, resulting in drier skin and a healthier environment for the residual limb. This helps to increase comfort and control, and reduce the damaging effects of relative motion on damp tissues that is often encountered with standard prosthetic liners.

# Breathable Technology

The body cools by moving blood flow closer to the surface of the skin, and when this is not sufficient the body produces sweat to increase cooling by evaporation.

The need to regulate body temperature is greater for amputees, and a lack of temperature regulation can have severe negative effects.

Expend more energy to walk than non-amputees (Trans-tibial 20-40% more)<sup>1</sup>

Ability to cool is compromised due to reduced body surface area

Sockets/Liners can act as insulators

Elevated skin temperatures can affect amputees' perception of comfort and may be related to incidence of residual-limb skin injuries.<sup>2</sup>

Heat build-up and increase in skin temperature increase the potential for skin problems.<sup>3</sup>

Heat and perspiration inside prosthetic socket most common cause for reduced quality of life.<sup>3</sup>

The Silcare Breathe range has been designed to tackle these issues. Laser drilled perforations transmit moisture away from the skin to ensure a comfortable, cool and secure fit for the user.

- Reduced relative movement between stump & liner
- Enhanced proprioception
- Enhanced comfort
- Drier, cooler, healthier skin

### Silcare Breathe Cushion Liner

### Stretch Zones

Seamless knitting technology provides bi-directional stretch to improve comfort and contouring and reduce shear force on the knee as it flexes.

### Tendresse<sup>™</sup> Finish

Provides a lower coefficient of friction than standard silicone, reducing shear stresses on the skin.

### Laser Perforations

Optimally sized pores distributed uniformly along the length and distal end of the liner permit the escape of moisture. Use with a one-way valve on the socket helps to generate a better vacuum and more secure fit.

### Silcare Breathe Locking Liner

### **Pinlock Locking System**

Locking system and unique one way valve create an airtight seal between the skin and the inner surface of the liner. No separate suspension sleeve is required with Silcare Breathe Pinlock liner contributing to a cooler environment for skin and a more comfortable limb and socket connection.

### **Stretch Zones**

Uni-directional stretch at the distal end resists pistoning whilst bi-directional stretch at the proximal end allows for comfortable knee flexion.

### Tendresse<sup>™</sup> Finish

A lower coefficient of friction than standard silicone reduces shear stress on the skin.

### Laser Perforations

Optimally sized pores distributed uniformly along the length and distal end of the liner permit the escape of moisture.

661 can take the leg off after a strenuous day and it's touch dry, it's changed my leg experience tremendously.

Dean

661 used to get a lot of sweating at the stump, now I don't get any and the callouses I used to suffer with have disappeared.

David

661 am able to run five miles every day and have no issues with blisters like I had before.

### Specification

 Activity Level:
 3-4

 Amputation level:
 Trans-tibial

 Sizes Available:
 22, 23.5, 25, 26.5, 28, 30, 32, 34, 36, 40

### Order Example
